```

```
-v, --verbose      be more verbose
-q, --quiet        be more quiet
--progress        force progress reporting
--reject-shallow   don't clone shallow repository
-n, --no-checkout  don't create a checkout
--bare            create a bare repository
--mirror          create a mirror repository (implies bare)
-l, --local        to clone from a local repository
--no-hardlinks     don't use local hardlinks, always copy
-s, --shared       setup as shared repository
--recurse-submodules[=<pathspec>]
                    initialize submodules in the clone
--recursive ...    alias of --recurse-submodules
-j, --jobs <n>     number of submodules cloned in parallel
--template <template-directory>

```
-u, --upload-pack <path>
                        path to git-upload-pack on the remote
--depth <depth>        create a shallow clone of that depth
--shallow-since <time>  create a shallow clone since a specific time
--shallow-exclude <revision>
                        deepen history of shallow clone, excluding rev
--single-branch         clone only one branch, HEAD or --branch
--no-tags               don't clone any tags, and make later fetches not to follow them
--shallow-submodules    any cloned submodules will be shallow
--separate-git-dir <gitdir>
                        separate git dir from working tree
-c, --config <key=value>
                        set config inside the new repository
--server-option <server-specific>
                        option to transmit
-4, --ipv4              use IPv4 addresses only
-6, --ipv6              use IPv6 addresses only
--filter <args>         object filtering
--also-filter-submodules
                        apply partial clone filters to submodules
--remote-submodules     any cloned submodules will use their remote-tracking branch
--sparse                initialize sparse-checkout file to include only files at root
```
